Please add the following new claims:

A2

--12. A method of manufacturing a light emitting device according to claim 2, wherein a metallic film is formed on the second luminous layer.

13. A method of manufacturing a light emitting device according to claim 3, wherein a metallic film is formed on the second luminous layer.

14. A method of manufacturing a light emitting device according to claim 4, wherein a metallic film is formed on the second luminous layer.

15. A method of manufacturing a light emitting device according to claim 2, wherein the luminous material comprises Alq_3 (tris-8-quinolilite-aluminum complex).

16. A method of manufacturing a light emitting device according to claim 3, wherein the luminous material comprises Alq_3 (tris-8-quinolilite-aluminum complex).

17. A method of manufacturing a light emitting device according to claim 4, wherein the luminous material comprises Alq_3 (tris-8-quinolilite-aluminum complex).

18. A method of manufacturing a light emitting device according to claim 5, wherein the luminous material comprises Alq_3 (tris-8-quinolilite-aluminum complex).

19. A method of manufacturing a light emitting device according to claim 6, wherein the luminous material comprises Alq_3 (tris-8-quinolilite-aluminum complex).

20. A method of manufacturing a light emitting device according to claim 2, wherein the dopant comprises an organic material showing fluorescence.

21. A method of manufacturing a light emitting device according to claim 3, wherein the dopant comprises an organic material showing fluorescence.

22. A method of manufacturing a light emitting device according to claim 4, wherein the dopant comprises an organic material showing fluorescence.

23. A method of manufacturing a light emitting device according to claim 5, wherein the dopant comprises an organic material showing fluorescence.

24. A method of manufacturing a light emitting device according to claim 6, wherein the dopant comprises an organic material showing fluorescence.

A2

25. A method of manufacturing a light emitting device according claim 2, wherein the dopant comprises an organic material showing phosphorescence.

26. A method of manufacturing a light emitting device according claim 3, wherein the dopant comprises an organic material showing phosphorescence.

27. A method of manufacturing a light emitting device according claim 4, wherein the dopant comprises an organic material showing phosphorescence.

28. A method of manufacturing a light emitting device according claim 5, wherein the dopant comprises an organic material showing phosphorescence.

29. A method of manufacturing a light emitting device according claim 6, wherein the dopant comprises an organic material showing phosphorescence.

30. A method of manufacturing a light emitting device according to claim 2, wherein said light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer; a game apparatus, a portable information terminal, and an image playback device.

31. A method of manufacturing a light emitting device according to claim 3, wherein said light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer; a game apparatus, a portable information terminal, and an image playback device.

A2

32. A method of manufacturing a light emitting device according to claim 4, wherein said light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer; a game apparatus, a portable information terminal, and an image playback device.

33. A method of manufacturing a light emitting device according to claim 5, wherein said light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer; a game apparatus, a portable information terminal, and an image playback device.

34. A method of manufacturing a light emitting device according to claim 6, wherein said light emitting device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, a sound reproduction system, a notebook type personal computer; a game apparatus, a portable information terminal, and an image playback device.--
